REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the present invention relates to a read circuit for an one time programmable memory device (OTP). The independent claims 1 and 7 recite a OTP device comprising a read circuit forming a first current path between the first memory cell and the reference voltage and a second current path between the second memory and the reference voltage for reading the bit and the complementary bit that are stored in the first and second memory cells, the first current path including a first circuit point that is associated with a first output terminal, and the second current path including a second circuit point that is associated with a second output terminal, and setting means that can be activated to bring the first and second circuit points to a voltage value that is substantially equal to the reference voltage, the setting means being able to set the value of the current flowing through each of the first and second current paths. The PRIOR ART fails to disclose or suggest such the setting means as described in the independent claims 1 and 7, therefore, claims 1-12 are in condition for allowance.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
